

AutoFinance IIS Deployment Runbook

Team Confluence-style (with Severity / Owner / Escalation)

Last Updated: 2026-05-06

1. Purpose

This runbook captures deployment and runtime issues encountered while deploying AutoFinance F&I; on IIS, with triage ownership and escalation paths.

2. Severity Model

Severity	Definition
SEV-1	Critical outage; deal workflow unavailable for all users.
SEV-2	High impact; major functionality broken with limited workaround.
SEV-3	Partial degradation; workaround exists.
SEV-4	Low impact; non-blocking or cosmetic issue.

3. Ownership and Escalation

Area	Primary Owner	Secondary Owner	Escalation Path
IIS Infrastructure	Infra/Windows Admin	DevOps Engineer	Service Desk -> Infra On-Call -> Platform Lead
App Build/Release	Frontend Engineer	Release Engineer	FE On-Call -> Tech Lead -> Eng Manager
Firebase Config/Data	App Engineer	Cloud Engineer	FE On-Call -> Firebase Owner -> Platform Lead

4. Incident Runbook Entries

INC-001: Duplicate MIME map (.woff2)

Severity: SEV-2 | Owner: IIS Infrastructure / DevOps

Error: Cannot add duplicate collection entry of type 'mimeMap' for '.woff2'.

Root Cause: IIS already defines the extension at inherited/global level.

Fix: In web.config, use remove then add inside staticContent for .woff2 and .webmanifest.

Validate: Rebuild, redeploy dist, and confirm site loads without MIME errors.

INC-002: Duplicate default document (index.html)

Severity: SEV-2 | Owner: IIS Infrastructure / DevOps

Error: Cannot add duplicate collection entry of type 'add' for 'index.html'.

Root Cause: index.html already inherited in IIS default document list.

Fix: In web.config defaultDocument/files, use remove then add for index.html.

Validate: Rebuild, redeploy, and verify root URL serves the app.

INC-003: Deal save fails with async listener message

Severity: SEV-1 when save flow is blocked | Owner: App + Firebase owner

Error: Uncaught (in promise) Error: A listener indicated an asynchronous response...

Observed Cause: Firebase APP ID typo in .env (y1:... instead of 1:...).

Fix: Correct VITE_FIREBASE_APP_ID, restart dev/build, and hard refresh browser.

Validate: Confirm Firestore writes to loanApplications succeed.

5. Standard Recovery Procedure

- 1) Capture exact IIS/browser error text.
- 2) Match with runbook incident ID (INC-001/002/003).
- 3) Apply config/env fix.
- 4) Run fresh build and redeploy only dist contents.
- 5) Smoke test /create -> /offers -> /summary end-to-end.

6. Preventive Checklist

Check	Status
Deploy only dist contents	Required
Use remove-before-add for IIS collection entries	Required
Validate Firebase APP ID format before build	Required
Run post-deploy end-to-end smoke test	Required
